

# SAFE-O-TRONIC® access

## Electronic Identification and Locking System

Mobile access solutions for hotels

# Next level *access*

Brand development, innovative design concepts and the use of mobile technologies are determining future trends in the hotel business. 2-in-1 locking convenience via a PIN code and RFID card makes SAFE-O-TRONIC® access a sustainable investment decision.

## 2-in-1 locking convenience

**SAFE-O-TRONIC® access is setting new global standards when it comes to the security and organisation of door and furniture locking systems. PIN code and RFID technology are combined in a unique way. With its worldwide patent-pending temporary guest code, SAFE-O-TRONIC® access ensures mobility, security and convenience when organising the use of your guest rooms, holiday homes or boarding houses.**

### **Keyless – via personal PIN code**

Only a light touch of the keys is required to enter the personal PIN code.

### **Contactless – via the RFID card**

When using an RFID data carrier, simply hold the digital card in front of the reader.

### **Future-oriented – via temporary PIN code**

The temporary PIN code, which is sent directly to your guest's mobile phone, can simply be entered at the entrance and at the room.

## SECURITY SOLUTIONS FOR HOTELS

# Mobile access

**Today, the quick and easy check-in from home forms part of the contemporary amenities of modern hotels for business and leisure guests.**

**This allows more time for the service personnel to care for guests - outside of the realm of bureaucratic formalities. SAFE-O-TRONIC® access offers you numerous options for adapting online check-in to meet the individual needs of your establishment and the requirements of each and every guest.**

## **Quick check-in – More time for looking after your guests**

Online check-in via RFID card

Guests book their rooms online and receive their room cards as soon as they arrive at reception. Your personnel can use the time gained for engaging with guests and pointing out special offers provided by your establishment.

## **Unattended check-in – relief for reception**

Online check-in via smartphone

Via PIN code

When booking rooms online, guests automatically receive a valid PIN code for the booked duration of their stay via email or an SMS on their smartphone. They can enter this code directly at the SAFE-O-TRONIC® access TS wall terminal at the entrance of the hotel and/or the SAFE-O-TRONIC® access DS door fitting, and enter their room, even if reception is not permanently manned, for example. As an option, guests also receive an additional RFID card for room access at reception upon request (e.g. the next day). The worldwide patent-pending online check-in via automatic PIN code allocation allows the operator to create access permissions centrally for one or multiple hotels and to send these to guests.

## **Flexible check-in solutions – For individual customer service**

Multi-optional online check-in

SAFE-O-TRONIC® access gives you the freedom to always organise your check-in in a way that is most convenient for your establishment as well as your guests. Be it regulars, VIPs or late arrivals, trendsetters, mavericks or nostalgics, with multi-optional online check-in, you have the perfect solution for all guest types. This is also the case with complex hotel facilities such as resorts, holiday homes and boarding houses, which have special requirements regarding flexible and resource-efficient access management.

**ONLINE-CHECK-IN**

**MULTI-OPTIONAL SOLUTION**

**Guest books room**

**Gust receives access code (PIN)  
or RFID card**

Guest uses PIN code or RFID card for purposes of identification

Guest enters room

# System landscape

**For integrated organisational solutions, SAFE-O-TRONIC® access offers a complete system landscape with perfectly matched components as regards function and design. With its wireless designer door and furniture fittings, SAFE-O-TRONIC® access makes organisational aspects easier and more convenient than ever before.**

## Door locking systems

Within the scope of flexible space utilisation concepts, SAFE-O-TRONIC® access DS offers the optimal solution for all types of internal doors. The Do Not Disturb function allows guests to indicate that they do not wish to be disturbed. Provision has also been made in the system for optional emergency cylinders.

## Digital cylinders

Electronic lock cylinders (SAFE-O-TRONIC® access CS) are available for external doors, all-glass doors or panel doors with narrow profiles.

## Furniture locking systems

The SAFE-O-TRONIC® access LS furniture locking system perfectly complements the door locking system. Be it changing-room lockers, lockable storage compartments, office furniture or other storage furniture, SAFE-O-TRONIC® access LS replaces conventional cylinder locks with electronic locking convenience, ensuring that laborious key management is forever a thing of the past.

**Emergency cylinders (optional)**

## Terminals

Terminals in the form of RFID wall readers are used for controlling electronic devices for access release, e.g. lifts, parking booms, electric door openers or turnstiles. The terminals (SAFE-O-TRONIC® access TS) are configured for offline or online operation. Energy saving switches complete the product range.

SAFE-O-TRONIC® access DS door locking system

SAFE-O-TRONIC® access CS RFID digital cylinders

SAFE-O-TRONIC® access TS energy-saving switches

SAFE-O-TRONIC® access LS furniture-locking system

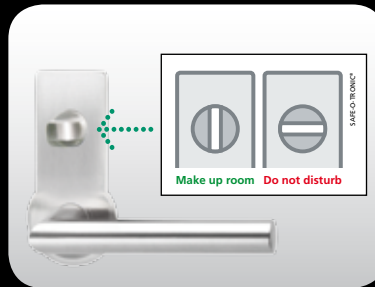

SAFE-O-TRONIC® access TS PIN and RFID terminal

## SYSTEM LANDSCAPE

The „Make up room“ or „Do not disturb“ function...

...is easy to activate for the guest, using the rotary knob.

For front-office, PMS and other guest management systems...

...interfaces can be integrated reliably.

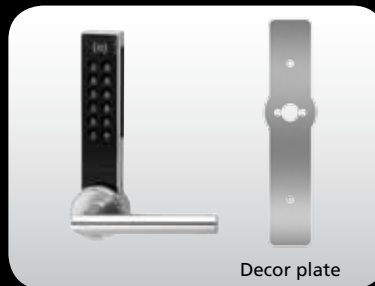

Furniture locking systems, e.g. in the wellness area...

...can easily be incorporated.

Door-locking systems are recommended both for new constructions...

and for renovations. Special decor plates are available on request.

with quiet-as-a-whisper noise reduction

Conventional PZ mortise locks can be maintained in most cases. Optional SAG springbolt bolts ensure additional.

# Customisation

**Be it shape or colour, logos or lettering, SAFE-O-TRONIC® access can be designed according to your individual needs. Fittings can be combined according to your particular requirements and to match your interior design style. In this way, your door-locking system blends in perfectly with your architectural and design concept.**

## Individual front panels

As an option, we design the look of your SAFE-O-TRONIC® DS using your motifs. Unleash your creativity!

## Logos

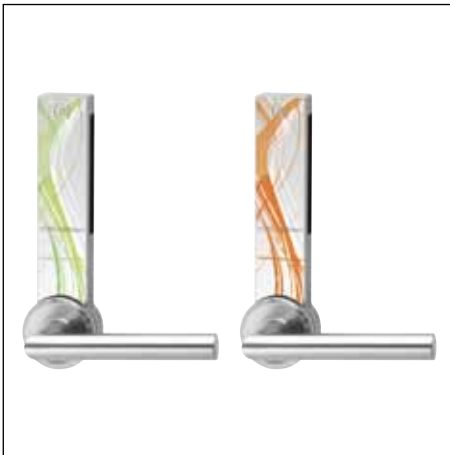

Displaying your logo on the door or furniture fitting communicates your brand at every access point. Appropriate colour schemes on the fittings allow for consistent visualisation of themes in the building structure or area signage.

## Lettering

Room numbers or room designations included on the front panel facilitate orientation.

## Top-quality faces

Top-quality, stainless steel faces and associated door handle sets and rosette fittings adapt classic and contemporary interior design styles.
